

Fractions (common)

A fraction is a part of a whole

Named fractions are equal parts of a whole

$\frac{4}{7}$

4 → Numerator

— → Vinculum

7 → Denominator

4 parts out of 7 parts

one half

$$\frac{1}{3}$$

one third

$$\frac{1}{4}$$

one quarter

$$\frac{1}{5}$$

one fifth

$$\frac{1}{6}$$

one sixth

$$\frac{1}{7}$$

one seventh

$$\frac{1}{8}$$

one eighth

$$\frac{1}{9}$$

one ninth

$$\frac{1}{10}$$

one tenth

Equivalent Fractions

Equivalent fractions can be made using two operations: **Multiplication** or **Division**

1) Multiplication:

Multiply both the numerator and denominator by the SAME number.

$$\frac{2 \times 2}{3 \times 2} = \frac{4}{6}$$

2) Division:

Divide both the numerator and denominator by the SAME number.

$$\frac{15 \div 3}{18 \div 3} = \frac{5}{6}$$

Types of common fractions

Proper Fraction

$$\frac{2}{4}$$

← Numerator (smaller than)
← Denominator

Improper Fraction

$$\frac{4}{3}$$

← Numerator (larger than)
← Denominator

Mixed Number

$$1\frac{2}{7}$$

← Proper fraction
← Whole Number

Improper Fraction to Mixed Number

Divide the **Numerator** by the **Denominator**

The remainder forms the proper fraction part of the mixed number.

$$\text{Eg. } \frac{8}{5} = 8 \div 5 = 5 \overline{)8} = 1 \frac{3}{5}$$

Mixed Number to Improper Fraction

Multiply the **Whole Number** by the **Denominator**, then **add the answer** you get to the **Numerator**. Write that number over the denominator.

$$\text{Eg. } 2\frac{1}{4} = \frac{(2 \times 4) + 1}{4} = \frac{9}{4}$$
